

I feel LPFM's should have priority over a translator, as in most cases they are providing locally originated news and programming whereas most translators are from miles away, LPFMs can and do provide a base for localism translators can't.

I also think LPFMs should have a max power equal to translators except when to cause real interference.

Also put back frequencies removed for 3rd adj protection.  
Institute LP-10s that have already been auth but not acted on.

Thanks for your attention in this matter.
